                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of novel human secreted proteins and the polymucleotide sequences encoding them. The invention also discloses vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins. The polypeptide and polymucleotide sequences for the secreted proteins are useful for preventing, treating, ameliocating or diagnosing medical conditions such as hyperproliferative disorders (e.g. leukaemia or breast cancers), wounds, reproductive disorders (e.g. leukaemia or breast cancers), wounds, reproductive thrombocytopaenia), immunodeficiencies (e.g. haemophilia or thrombocytopaenia), immunodeficiencies (e.g. graft-versus-host disease, thymic hypoplasia), autoimmune disorders (e.g. graft-versus-host disease, wultiple sclerosis or Hashimoto's thyroiditis), allergies (e.g. asthma), viral or bacterial or fungal infections (e.g. graft-versus-host disease).

C disorders (e.g. kidney failure), cardiovascular disorders (e.g. asthma), cardiovascular disorders (e.g. angina pectoris, cerbral ischaemia or congenital heart defects), respiratory calsorders (e.g. widney failure), cardiovascular disorders (e.g. angina pectoris, cerbral ischaemia or congenital heart defects), respiratory calsorders (e.g. disorders), and inflammations (e.g. Crohn's disease). The polymucleotide or polypeptide may also be used as vaccine adjuvants.

C ADD82641ACD82950 encode human secreted proteins or their fragments.

```

New nucleic acid molecule, useful for preparing a medicament for diagnosing, preventing, treating or ameliorating a medical condition e.g., cancer.

Claim 1; SEQ ID NO 174; 256pp; English

Ø The invention describes an isolated nucleic acid comprising a sequence having 95 % identity with: a polynuclectide fragment of a sequence not given in the specification, or its allelic variant; a polynuclectide fragment of the CDNA sequence; a polynuclectide sequence encoding a polypeptide, or its fragment, domain, epitope or species homologue; or applynuclectide that hybridies under stringent conditions to any one of the sequences of (a)-(c). The nucleic acid is useful for preparing a

be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SP expression e.g. cancer, haematopoietic disorders, canderin disorders, diseases of the immune system, inflammatory candorrine disorders, diseases of the immune system, inflammatory disorders and many others. Full details of disorders that may be consequented, disagnosed and/or treated by the above methods are given in the specification. The nucleic acid molecules may be used to proteins The nucleic acid and it's complementary sequences may also be used by presence of similar nucleic acids in samples, and therefore which cas antiques in the production of antibodies adains also be used to a antiques in need of restorative therapy. The SPS may also be used to assays to identify modulators of SP expression and activity. The anti-SP entibodies and antibodies may also be used to down regulate expression and activity. The anti-SP antibodies may also be used to down requlate expression and activity. The anti-SP antibodies may also be used as disgnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAGAACCACGCCAAGTTAAAATCATTGCTTGGACTTCTAAAACATCTGTTGCTTATGTAA 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to PRO proteins and their coding sequences. The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polyasccharide artigen unresponsiveness, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency with hypogammaglobulinemia of infancy, Burkitt's Iymphoma, intermediate lymphoma, follicular lymphoma, type II hypersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic, anaemia, mysathenia gravis, hypoadrenocorticism, glomomrulonephritis, or anaemia, mysathenia gravis, hypoadrenocorticism, glomomrulonephritis, or anaemia, mysathenia gravis, hypoadrenocorticism, glomomrulonephritis, or encionent for treating a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development

The invention relates to a novel isolated nucleic acid and the PRO
CC polypeptide encoded by it. A protein of the invention has
antiniflammatory, antidarthritic, antishematic, immunosuppressive,
costeopathic, antidabetic, dermatological, antipsoriatic, antiallergic,
antiasthmatic, hepatotropic, and respiratory activity. A polymucleotide
cof the invention may have a use in gene therapy. The PRO polypeptide, its
agonist, antagonist, or antibody that specifically binds to the
cof the invention may have a use in gene therapy. The PRO polypeptide, its
agonist, antagonist, or antibody that specifically binds to the
cof upperide is useful for treating an immune related disorder such as
systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
costeoarthritis, a spondyloarthropathy, systemic sclerosis, an
idiopathic inflammatory myopathy, 3/30gren's syndrome, systemic
cot sease, a demyelinating dolyneuropathy, Guillain-Barra syndrome,
cot chronic inflammatory demyelinating polyneuropathy, a hepatobilary
cot system, idiopathic demyelinating polyneuropathy, Guillain-Barra syndrome,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence was isolated using the method of the invention as the SCZ gene. This sequence has been previously identified as CD84, GenBank Accession No: NM 001874, CD84 is a 73 kDa antigen present on platelets, monocytes and circulating B cells. The proteins encoded by this sequence may be involved in the processes by which the brain responds to biological stimuli. Therefore they may provide targets for therapeutic intervention in the treatment of schizophrenia. The SCZ sequence may be used in a new method comprises determining the presence or absence of an platient. The method comprises determining the presence or absence of an allele of a linked polymorphic marker in the DNA of the patient. The polymorphic marker is present in chromosome 1422 and is linked to a gene (SCZ) having a variant form associated with a phenotype of schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TATGGATCTTGCTCCTTTGCCTGCAAACCTGGCAGGAAGCAGCTGGAAAAGACTCAGAAA 126

                                                                                                                                                                                                                                                                      Š
                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                         The invention relates to an isolated polypeptide (I) associated with breast cancer which is encoded by a nucleic acid molecule comprising a nucleotide sequence (S1). Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful as a marker for breast cancer and in breast cancer therapy. Sequences given in records ACN78851-ACN92934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20030099974

The invention relates to treating a subject having a condition that benefits from modulating the balance of regulatory T cell function relative to effector T cell function, or vice versa, in a subject. The method involves administering an agent that modulates the expression or activity of a molecule selected from PTGER2 and TGFbetal, or Jagged-1, GPR-32, CDB3, SECTOONIN R2C, GPR63, histamine R-H4, GPR-88, EPG-R, PGG-1, PGG-3, PSG-9, PDB-4d, and PI-stamine R-H4, GPR-88, EPG-R, such that treatment occurs. The methods are useful for diagnosing, preventing or treating conditions characterized by a too-vigorous or weak effector T cell or regulatory T cell response to antigens associated with the condition, such as in an allergic response, an autoimmune disorder, a viral infection, a microbial infection, a parasitic infection or a tumour. The present sequence represents a DNA encoding a human leukocyte differentiation CD84 antigen, preferentially expressed in regulatory T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating a condition that benefits from modulating regulatory or effector cell function comprises administering an agent that modulates the expression or activity of a gene or polypeptide (e.g. PTGER2, TGFbetal, Jagged-1 or GFR-32).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     153
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     194
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GTTAAAATCATTGCTTGGACTTCTAAAACATCTGTTGCTTATGTAACACCAGGAGACTCA 254
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample, where a higher level of protein expression in the first soft tissue sample indicates the cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic said sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                      cytostatic; gene therapy; vaccine; screening; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        93
                                                                                                                                                                                                                                                                                                                                                                                                          Barly detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TIGCTCCTTIGCCTGCAAACCTGGCCGGAAGCAGCTGGAAAAAGACTCAGAAATCTTCACA

The invention relates to nucleic acid molecule, designated CD2000 which encodes a polypeptide containing immunoglobulin (Ig) and Ig-like domains and SahM associated protein (SAP) morlifs. CD5000 DNA and protein is useful for treating disorder such as immune prolliferative disorders. (e.g., arthritis, multiple sclerosis, Grave's disease, and Hashinoto's disease), T cell disorder (e.g. acquired immune deficiency syndrome (ADBS)), inflammatory bowel disease (e.g. theumatory syndrome colitis), inflammatory disorders (e.g. theumatory alsorders (e.g. asthma and psoriasis), apoptotic disorders (e.g. theumatory disorders, septic shock, chronic obstructive pullmonary disease (e.g. systemic lupus erythematosus, and insulin-dependent diabetes mellitus), cytotoxic disorders, septic shock, chronic obstructive pullmonary disease (e.g. emphysema), bronchitis, cachexia, jaundice, hepatic circulatory disorders, hepatic sis section accuse myeloid leukaemia, haemophilia and anaemia. CD2000 DNA is useful in screening assays (e.g. encoders) assays Novel isolated polypeptide containing immunoglobulin and immunoglobulin-like domains and SLAM associated protein, termed CD2000 or CD2001, useful for treating immune, inflammatory, or hepatic circulatory disorders. emphysema; cachexia; hepatic circulatory disorder; hepatitis; cirrhosis; acute myeloid leukaemia; haemophilia; anaemia; gene therapy; cytostatic; immunosuppressive; neuroprotective; antinflammatory; Crohn's disease; osteopathic; antibacterial; immunomodulator; inflammatory bowel disease; jaundice; dermatological; ulcerative colitis; AIDS; CD84; gene; ds. 74 65 (e.g. chromosomal mapping, tissue typing, forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics), and in methods of treatment (e.g. therapeutic and prophylactic). The present sequence is human CD84 DNA used in the invention CGGTGCTTTTCCACAGAAGGTTAGACCCTGAAAGAGATGGCTCAGCACCACCTATGGATC CCGTGCTTTTCCACAGAAGGTTAGACCCTGAAAGAGATGGCTCAGCACCACCTATGGATC Gaps ; 0 Length 1040; Sequence 1040 BP; 308 A; 256 C; 231 G; 245 T; 0 U; 0 Other; Indels 9 Score 1033.4; DB 6, Pred. ```
This sequence represents a nucleic acid molecule designated Gene 164 from the human cDNA clone HSAWF26 (deposited as clone ATCC 97903 and ATCC 900499) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAV59502) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV5511-V59812; amino acid sequences AAW74731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rosen CA, Fischer CL, Soppet DR, Carter KC;

Example 1; SEQ ID NO 303; 129pp; English.

The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 cDNA sequences also given in the specification. The protein is used in a pharmaceutical composition used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are disgnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative

ugo cardiac arrest, cemebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, angiogenesis, nervous system disorders e.g. Alzheimer's disease, e.g. corneal infection. The polypetides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase cordercase storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a cDNA derived from a gene encoding one of the novel human secreted proteins of the invention. Note: This sequence did not form part of the printed specification, but was obtained in electronic format directly from USPTO at e.g. neoplasms of the breast or liver, cardiovascular disorders seqdata.uspto.gov/sequence.html?DocID=6420526B1 %

Patent No. 6812339

GENERAL INFORMATION:

TITLE OF INVENTION: DOLYMORPHISMS IN KNOWN GENES ASS

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASS

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASS

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF I

FILE REFERENCE: CLO01307

CURRENT APPLICATION NUMBER: 60/291,949,016

FRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

Sequence 28973, Application US/09949016

Patent No. 6612339

GENERAL INFORMATION:

TITLE OF INVENTION: FOLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CLOL01307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR PILING DATE: 2000-10-20

PRIOR PLILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 49963, Application US/09949016

Sequence 49963, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

ITILE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-00-08

NUMBER OF SEQ ID NOS: 2070012

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 49963

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                               US-09-882-171-174
